# Windshield tag

Setting up windshield tags

Setting up windshield tags for your building is simple. From the ButterflyMX OS, assign windshield tags to residents (see instructions for programming tags on the next page).

- You will need to let residents know how and where to place their windshield tags.

- Inform residents which side of the garage the vehicle reader is installed on as the windshield tag must be placed on the side closest to the reader.

- Windshield tags must be positioned inside the vehicle at the top of the windshield next to the central rearview mirror. The tags must be adhered to the glass, not to the interior cloth or plastic edges.

- Windshield tags are not meant to be transferred between cars or tenants. Attempting to transfer a tag will result in damage to the antenna and loss of adhesion.

- Once installed, residents can use swipe-to-open in the mobile app or their windshield tag to access the gate or garage.
