

RemoteLock Integration

The RemoteLock and ButterflyMX integration allows residents and property staff to easily and securely access your property's front entrance, amenity spaces, and individual apartment units – all from the ButterflyMX mobile app or via a resident PIN.

If a property has ButterflyMX and select smart locks supported by RemoteLock (including various August, HID, Kwikset, Schlage, and Yale smart locks), residents & staff will be able to unlock the smart lock from within the ButterflyMX mobile app with just a swipe.

How it works:

Once ButterflyMX has been integrated with RemoteLock, building staff and residents can use the ButterflyMX mobile app to access building entrances, gates, garages, common areas, elevators, amenity spaces, and apartments, just by swiping to open.

Resident Features

Keyless entry and remote access - unlock your building's door or gate and your apartment unit smart lock from one app on your smartphone.

Seamless visitor access - send friends, family, and guests PINs for building access that can be revoked at any time.

Live video - see who's trying to access your property before letting them in.

Property Manager Features

Self-guided tours - enable self-guided tours at your property so prospective residents can tour without the assistance of staff.

Audit trails - view time- and date-stamped photos of every person who has entered your property using the ButterflyMX video intercom system.

Remote management - manage both systems from one place, from anywhere in the world.
