

Touchless Entry with ButterflyMX

ButterflyMX is a great option for any property that is looking to provide touchless entry for its residents. ButterflyMX Smart Intercoms have standardized relay outputs which can be integrated with access control systems and motorized door hardware to operate access points without requiring residents to actually touch the door or intercom.

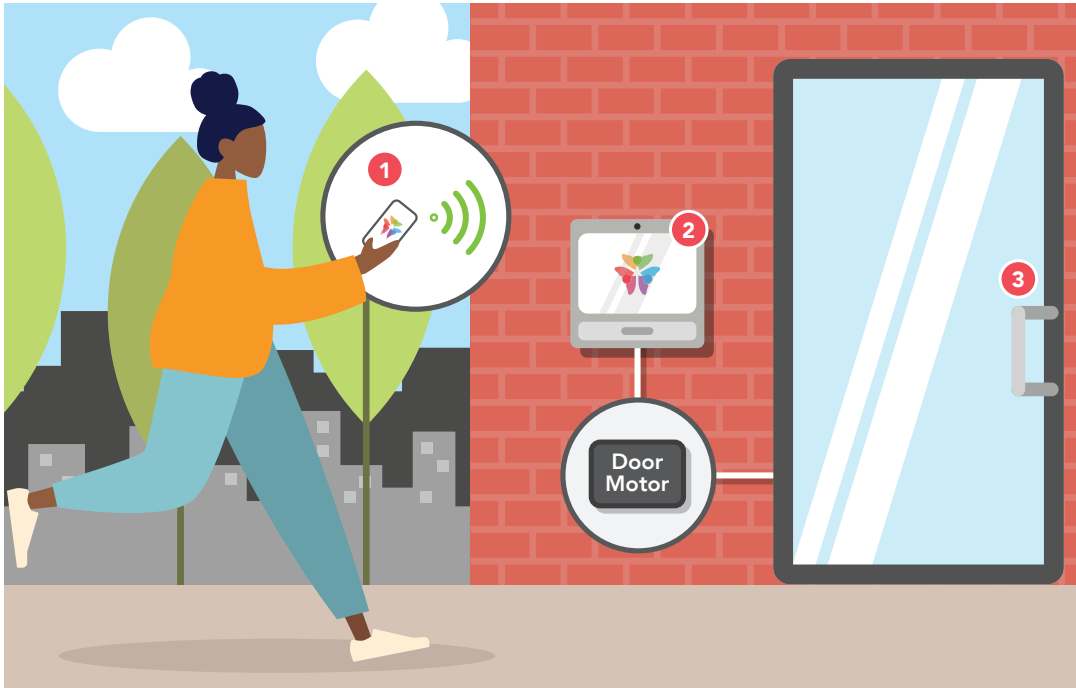

Turnkey Solution for Properties with an Access Control System:

*If your building has an access control system, reach out to sales@butterflymx.com

Touchless Entry with ButterflyMX

ButterflyMX integrated with a motorized door/gate directly for properties without an access control system

Key Indicators:

- The property manager does NOT administer a tenant database in an access control system
- The property does not have card readers/key fobs for its doors/gates
- Residents can use a push plate to open the door

Solutions/Next Steps:

- Wire the ButterflyMX directly to the motorized gate/door
- Reach out to projects@butterflymx.com for a wiring consultation
