

Property access made simple

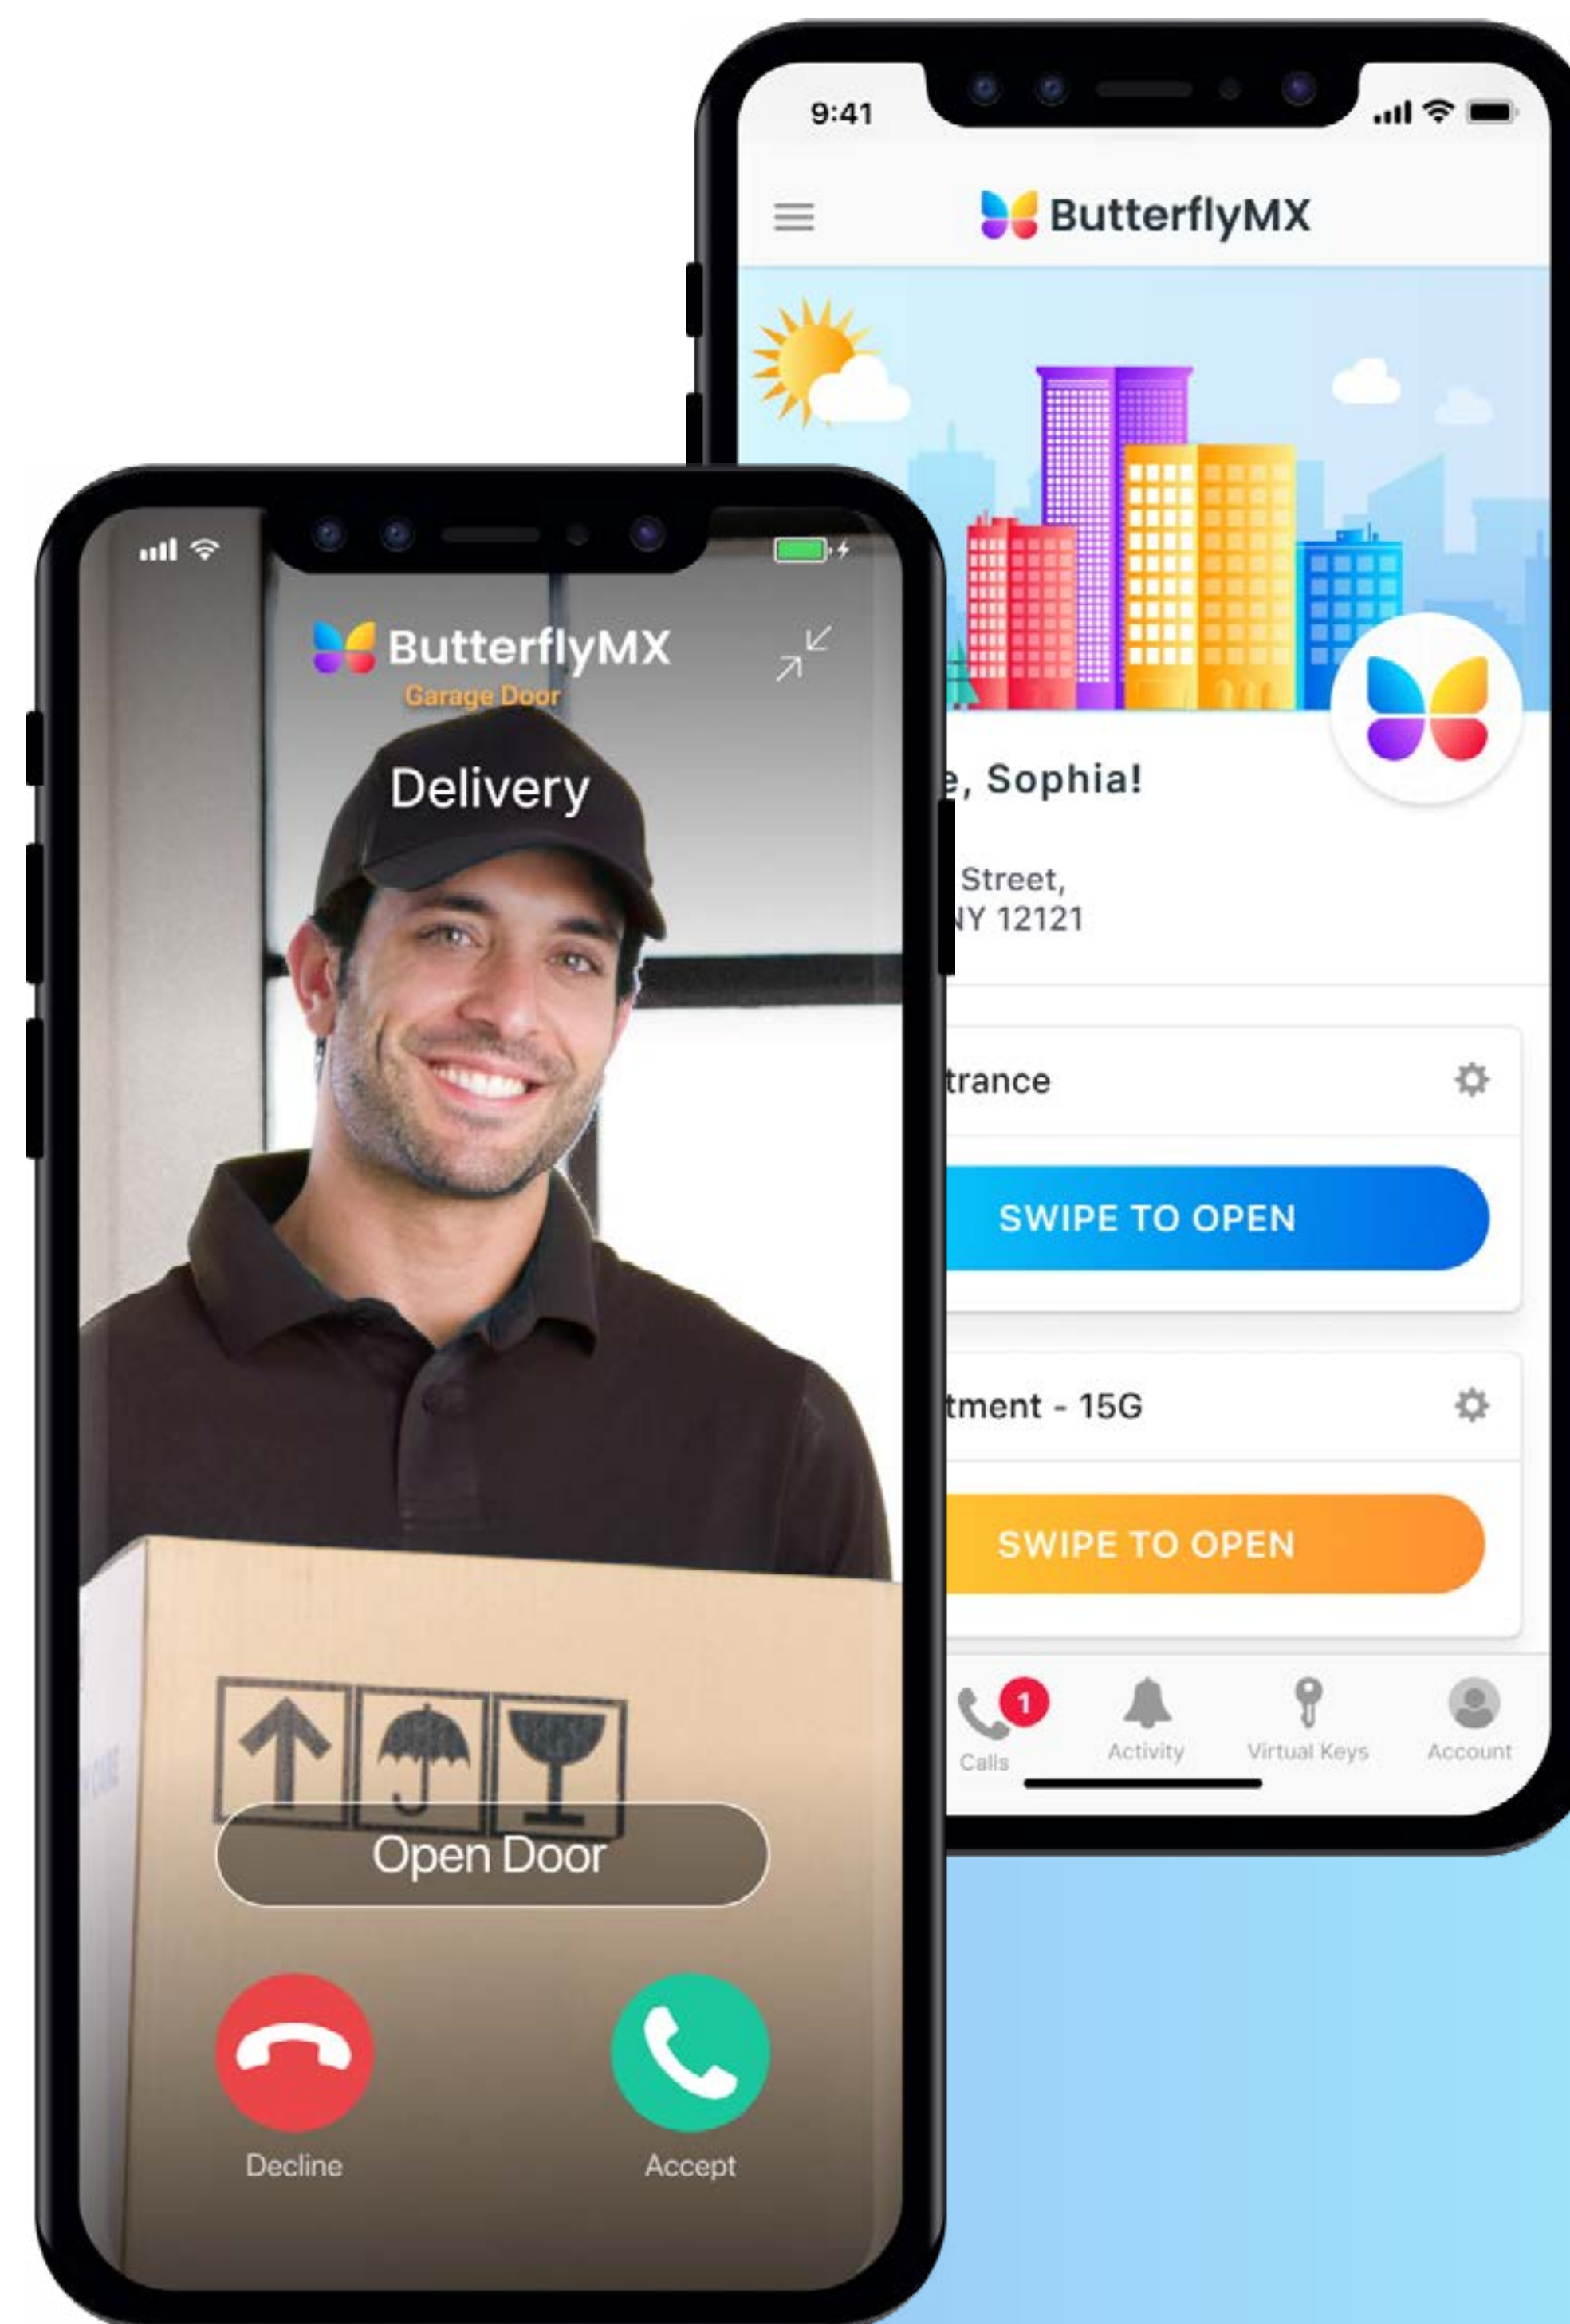

PRESS KIT

Who we are

Founded in 2014, ButterflyMX is on a mission to empower people to open and manage doors & gates from a smartphone. Our products are installed in more than 10,000 multifamily, commercial, gated communities, and student-housing properties worldwide, including properties developed, owned, and managed by the most trusted names in real estate.

Our features are designed for developers, owners, property managers, and tenants. And our products lower operating costs and improve tenant satisfaction. Developers and owners no longer need to run building wiring or install in-unit hardware. Property managers can grant building access, revoke permissions, and review entry logs from an online dashboard. Residents can open doors from their smartphones, issue visitor access, and see who is trying to enter the building.

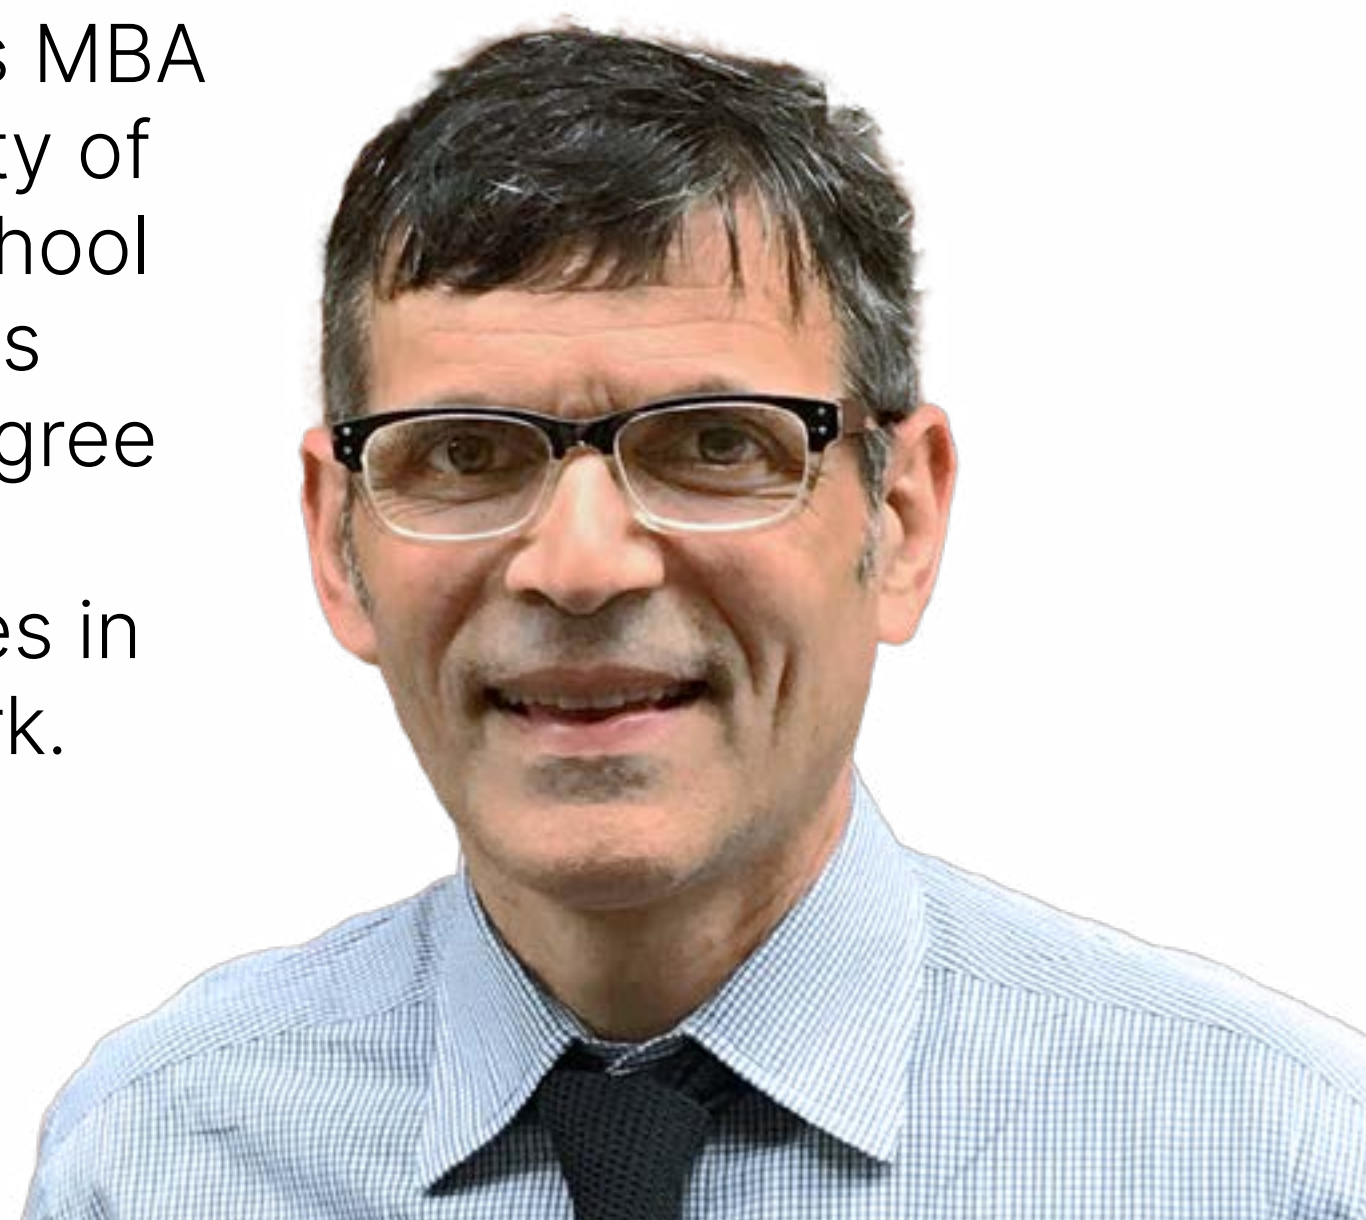

Meet our founder & our CEO

Cyrus Claffey

Founder of ButterflyMX

After business school, Cyrus began his career in M&A banking in the tech sector. From this perch, he first became interested in the growing ecosystem of services enabled via a smartphone. Upon noticing that the entryways of many multi-tenant buildings restricted access to these services, he created ButterflyMX to provide secure, convenient, and affordable property access from a smartphone.

Cyrus received his MBA from The University of Chicago Booth School of Business and his undergraduate degree from Macalester College. Cyrus lives in Brooklyn, New York.

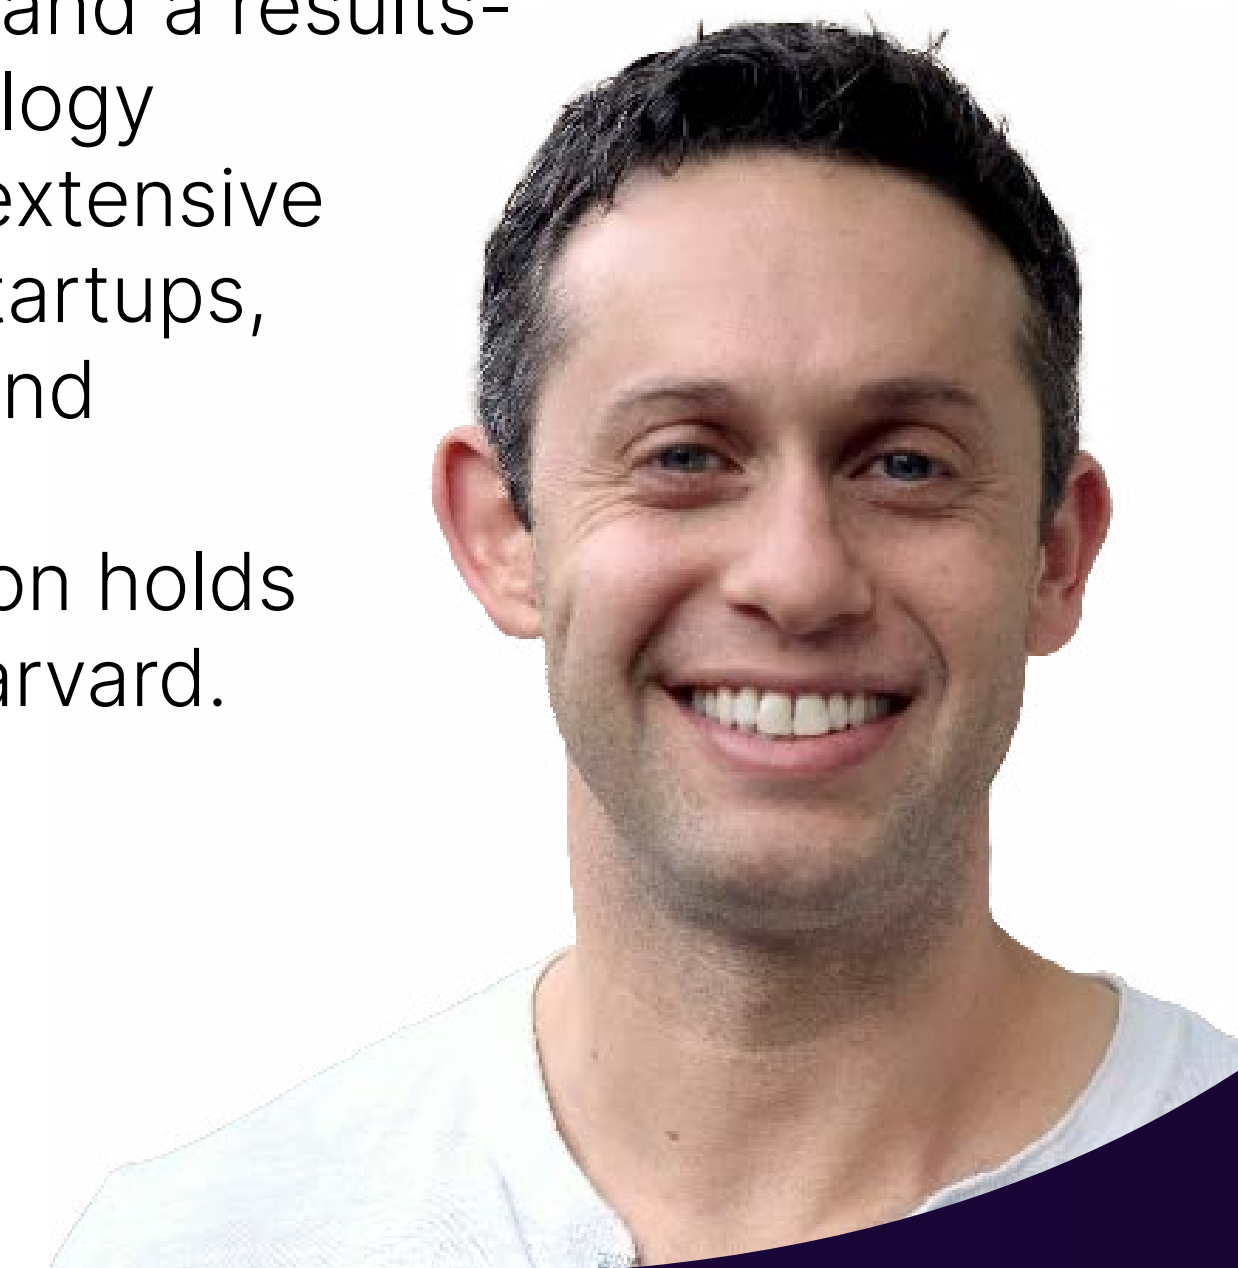

Aaron Rudenstine

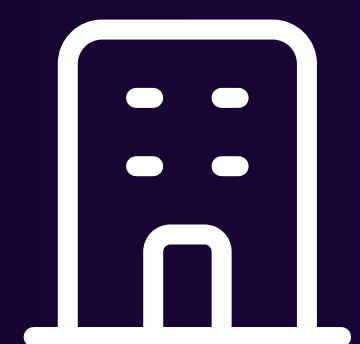

Chief Executive Officer of ButterflyMX

Aaron specializes in building high-performing teams to launch and grow new technology products. He was a co-founder of Citymaps, which was acquired by TripAdvisor in 2016, and is an investor in Reddit, Button, Omaze, Henry The Dentist, Parallel Wireless, Clear Ballot, Pinata, and FilmRise.

He is an angel investor, board member, advisor, author, and a results-oriented technology executive with extensive experience at startups, growth-stage, and publicly traded companies. Aaron holds an MBA from Harvard.

Property Managers

Developers and Owners

Get to know our products

Video intercom – to easily manage door and gate access from a smartphone or computer, see who you are letting in, and connect to your property management & access control system

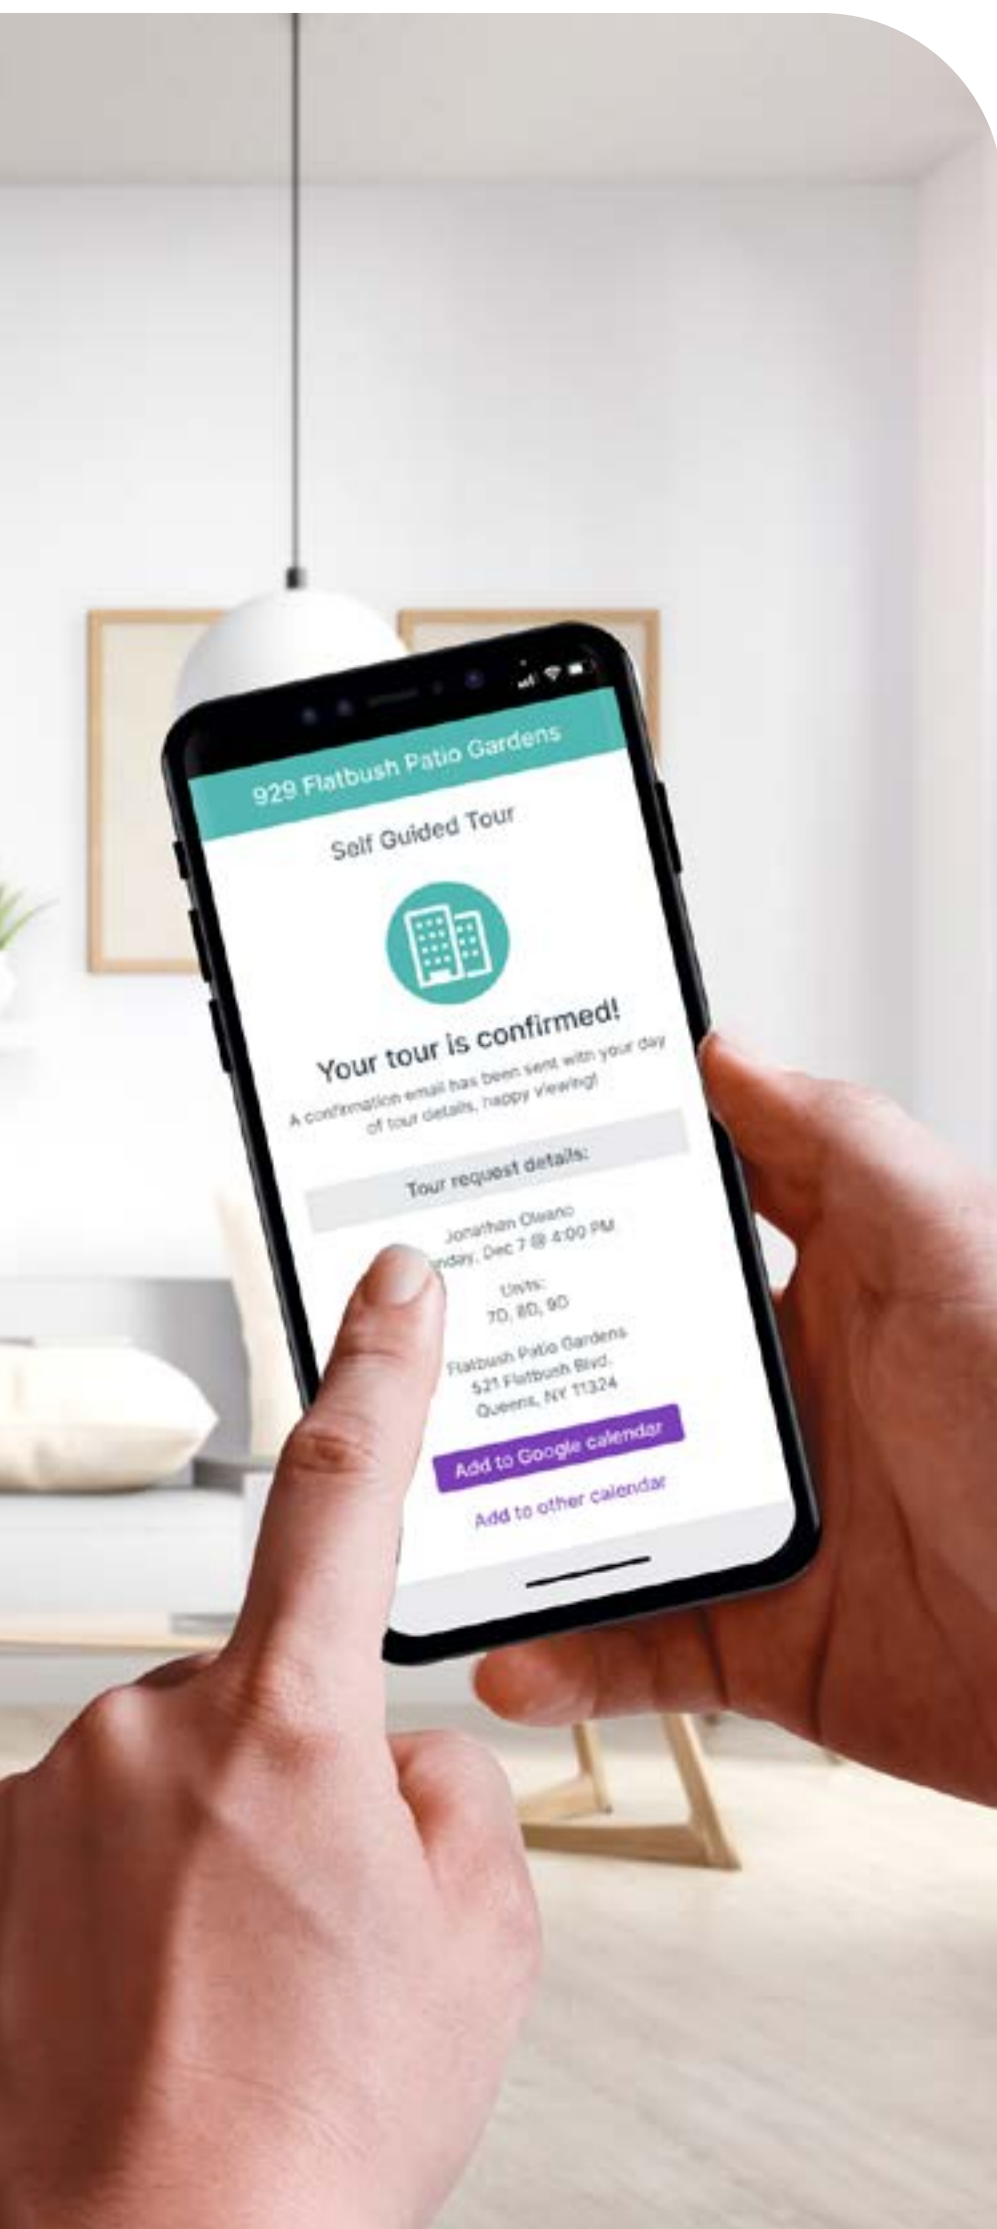

Keypad – for smart, simple, and secure access to amenity spaces, auxiliary doors, garages, and more

Self-guided tours – for prospective residents to tour your property on their schedule while keeping your property safe and secure

Key locker – an automated key locker system that allows prospective residents to access locked amenity spaces and apartment units during self-guided tours

Delivery Pass – a simple way for residents to get deliveries safely into their buildings

ButterflyMX OS – an online platform for building staff to seamlessly manage property access and integrate our products with other property management tools and services

What people are saying

ButterflyMX provides excellent customer training online and is quick to respond to any emails or questions. The intercoms work well, and the system is a great improvement over the old intercom that we had. Both the video and the audio are of excellent quality. I would recommend ButterflyMX to other buildings.

Susan Caprio

January 20th, 2022

We use ButterflyMX at our property and love it. It's convenient for us in the office and most convenient for the residents who live here. I'm the community manager and it makes life really easy. You're able to buzz people in I also think the feature where you can see the person's face is favorable. I highly recommend the ButterflyMX system for many reasons. The safety features alone are wonderful. Wonderful concept ButterflyMX!

Karen Halstead

December 16th, 2021

As an integrator who has installed a lot of callboxes, ButterflyMX is by far the best. Excellent tech support, ease of install, and the best part is all of my customers are happy. Thank you!
