Access Feature

Virtual Key Sharing: Unit Address

The ButterflyMX Virtual Key provides all essential details for a guest's visit. Property managers have the option to display either the building address or the unit issuer's address.

To display the unit issuer's address

01. Contact your ButterflyMX Client Success Manager to enable this feature for your building.

02. Update unit labels to show the address or any information the tenant would like displayed in the address of their Virtual Key.

03. Virtual Key addresses in text, email, and Apple Wallet will show the unit label instead of the building address - but will keep the building's city, state, and zip code
