

QR Code Intercom

Smart, simple, and secure smartphone-based property access with lower upfront hardware and installation costs.

Smart access for any entrance

ButterflyMX's QR Code Intercom provides visitor access and security, purposefully designed and built for smaller buildings and secondary entry points.

Seamless access for visitors and deliveries

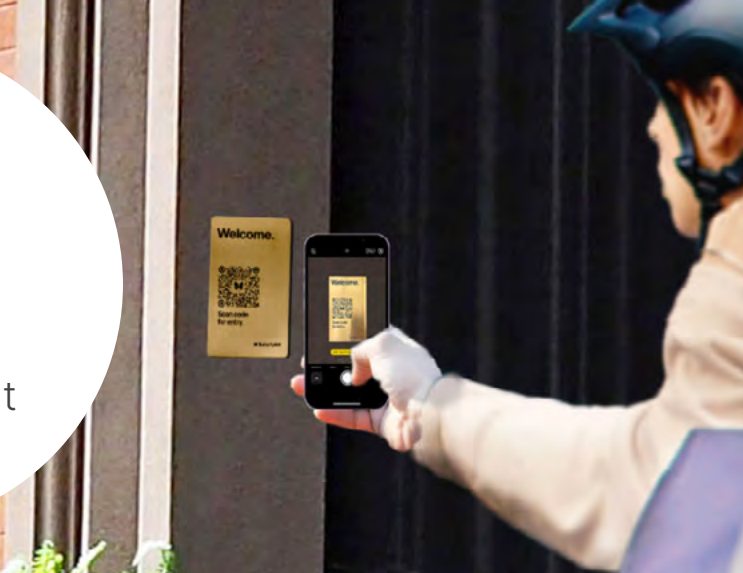

Visitors scan the QR code using their smartphone, which opens a secure, web-based intercom. From there, they can search the directory to place a video call to property staff or residents.

Fully integrated with ButterflyMX's access control and security platform

This Intercom works seamlessly with the existing ButterflyMX mobile app, Video Intercom, Access Control System, Keypads & Readers, Security Cameras, and OS.

Lower cost, faster install

The QR code plaque mounts with adhesive or screws and connects to the ButterflyMX 2-Door Controller.

Secure, encrypted access

Protected by end-to-end, 256-bit encrypted communications, featuring geofencing, rate limiting, session time limits, and a comprehensive audit trail in the ButterflyMX dashboard.

Built for the real world

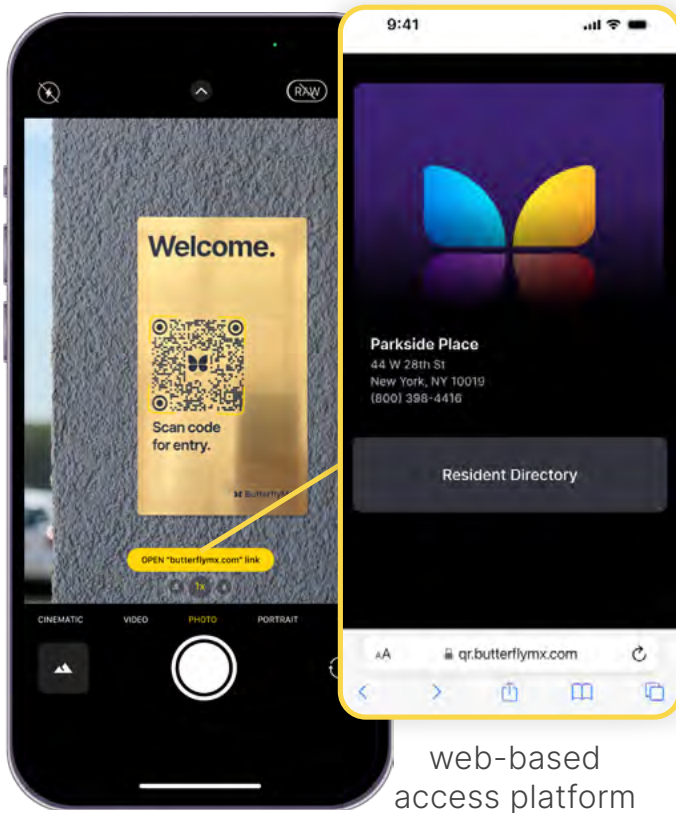

Made from outdoor-rated materials, the plaque is resistant to weather, scratches, and impact. Remains visible and scannable in all lighting conditions.

Sleek and adaptable design

Available in stainless steel (silver), brass (gold), or anodized aluminum (dark grey) in both landscape and portrait orientations, to match the aesthetic of any property and the space available around each entrance.

INSTALLATION

- Mount the QR plaque using adhesive or screws
- Pair it with the ButterflyMX 2-Door Controller
- Manage users, access credentials, and more from the ButterflyMX OS

VISITOR EXPERIENCE

Step 1: Scan the QR code

Visitors scan the laser-etched QR plaque using their smartphone.

Step 2: Launch web-based intercom

A secure web page opens instantly; no app download or sign-in required.

Step 3: Search the directory

Visitors find the right resident or unit number by scrolling or searching.

Step 4: Place a video call

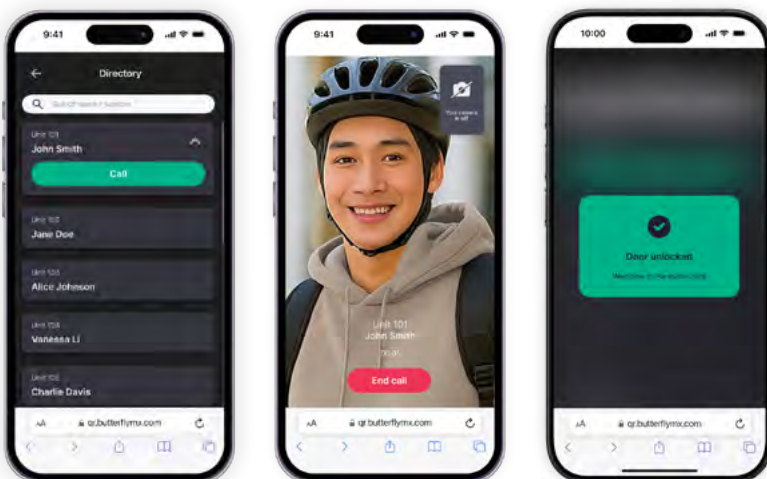

Visitor starts a one-way video, two-way audio call to the property staff or resident.

Step 5: Grant access

The resident sees who's at the property's door or gate and taps "Unlock" in the ButterflyMX app to provide access.

Step 6: Entry granted

The door or gate is unlocked, and a time-and date-stamped photo from the video call is saved in the ButterflyMX OS for future review.
